

# where's my DIPSTICK

...a new car maintenance service that enhances your buying experience with a learning one.

## fuel filters

### What is a fuel filter?

We keep out the dirt and grime that can build up when you put fuel in your car. Think how much fuel must pass through your car's engine every year, so it's important to keep out the dirt particles and ensure your engine runs smoothly. Your car's performance depends on a finely balanced mix of air and clean fuel. By keeping dirt at bay, your car's fuel filters play a vital role in your car's health and efficiency.

### Are there different filters for different cars?

Yes. There are different fuel filters for different models of car. Here at Where's My Dipstick, you can use our easy part selection widget which will automatically chose the correct one for your vehicle.

### What if I don't change my filter on a regular basis?

Dirty, blocked, or worn fuel filters will compromise your car's performance. Failure to filter out dirt and debris could clog your fuel injectors and carburettor. This in turn could lead to damage and the need for costly repairs or replacement parts.

It's inexpensive and easy to replace your fuel filters – so don't leave it too late. Change yours regularly and buy a high quality product to deliver full protection for your engine. ■
